

Client: Ogilvy & Mather

Project: Canary Wharf Access Control System

Background

Ogilvy & Mather and Taylor Technology Ltd have just worked closely in designing and delivering the Access Control System for the security requirements at Cabot Square. The installation commenced April 06 and was successfully completed at the end of July 06.

Control of the system is controlled by Bewator/Cotag Granta 4 Operating Software Platform, which allows the user full control of the system perimeters.

System Overview

The Access Control System installed comprised of 38 Electronic Controlled Doors restricting access to staff, visitors and contractors.

Proximity card readers are installed for entry and exit purposes on both sides of the doors. All doors are monitored from 3 viewing PC Stations around the premises. Staff and contractors photos are taken and then printed on to the Access Control user/visitor cards.

"Effective security is about using the right equipment in the right way - That's why we choose Taylor Technology for their expertise and professionalism "

Dave Goulding
Facilities Director
